Abstract

The invention relates to a solid dishwasher detergent which comprises a) 1 to 40 wt.% of a bleaching agent, b) 0.25 to 20 wt.% of non-ionic surfactants(s); and c) 0.01 to 10 wt.% of at least one polymer having a molar mass of 2000 g mol^{-1} or more and having at least one positive charge. The detergent is characterized in that the weight ratio of component b) to component c) ranges between 25:1 and 100:1, preferably between 30:1 and 80:1, and specifically between 35:1 and 75:1. The inventive dishwasher detergent is characterized by an improved cleaning and rinsing power and improved processability and shelf life.
